APPLICANT'S STATEMENT OF SUBSTANCE OF THE INTERVIEW

Sir:

As required by 37 CFR §1.133(b), Applicant submits a Statement of the Substance of the Interview of February 5, 2009. During the interview with the Examiner, as noted in the Interview Summary Report of the Examiner dated February 9, 2009, the Examiner did note that the undersigned did argue that the Wada reference was not pertinent inasmuch as it did not disclose room temperature refrigerant material or high temperature conductor material being processed into particles, sheets or filaments having a minimum size of from 0.001 mm to 0.1 mm.

The Examiner further argued that the above-noted range was not supported by the specification with regard to either the high temperature conductor or with regard to the refrigerant material.

During the course of the interview, the undersigned argued that the center paragraph of page 4 of the application stated that the minimum size of the magnetic refrigerant material balls or particles could be more than 0.001 mm. With regard to the filament size, the same range is set forth in Paragraph "5" on page 5. It is further noted that original claim 2 sets forth that the size of the refrigerant material of either the particles, sheets, or filaments could be of a size more than 0.001 mm. Thus, support for the low range of the magnetic refrigerant material does exist in the application as filed.

No. 455

MAR 02 2009

With regard to the upper end of the range, that is magnetic materials having a size up to 0.1 mm, the second to the last paragraph of page 5 states that sheets can be of a size less than 0.1 mm, and the last paragraph on page 6 states that the thickness of the sheet or diameter of the filament is not more than 0.1 mm.

With respect to the thermal conductive material that the size of particles and filaments is greater than 0.001 mm, support exists on page 4, center paragraph, the end of paragraph "1" on page 4, and in paragraph 5. That the size of the sheet is less than 0.1 mm is set forth on the second to the last paragraph of page 5 as well as in original claims 7 and 9.

Although the application as filed has basis of support for at least the above-indicated materials, the same is now rendered moot inasmuch as the Applicant has amended independent claim 1 and added new independent claim 13 wherein the size of the material is stated to be greater than 0.001 mm and smaller than 1 mm.

The Applicant wishes to thank the Examiners for the courtesy of granting an interview to Applicant's representative.

Respectfully submitted,

HUDAK, SHUNK & FARINE CO. LPA
